

## Maintenance Series: Seals, Pumps, Nozzles, and More Session Questions and Answers

**Q: How do I know what type of seal material I should use with a particular cleaning chemistry?**

**A:** Check with the chemistry manufacturer; they have a complete list in their technical data.

**Q: How do I know if my nozzles are lined up correctly following a scheduled spray bar/nozzle cleanout maintenance?**

**A:** Close all doors and windows on the machine, fill with water, and quickly start and stop the pump while observing the spray pattern.

**Q: I find that I am quickly using a lot of chemistry...what should I do?**

**A:** Check your chemical isolation section and see if fluid is leaving the machine via that route.

**Q: How do I find out what type of curtain material I should use?**

**A:** Check with the machine manufacturer; they should be able to direct you.
